

## Project information

 August, 2013

 CC5

 90 sq m CC5

 Channel lining

 Vaughan, ON

 City of Vaughan

 36 months after installation

In August of 2013, the City of Vaughan's Public Works department in Vaughan, Ontario installed 90 sq. meters of CC5 batched into one of the cities water diversion ditches. Prior to installation the ditch had been over grown with vegetation and proper water run off was difficult. Concrete Canvas was chosen due to its benefits of rapid installation time and maintenance cost savings over time.

36 months after the installation took place, the Concrete Canvas (CC) lined ditch is holding strong. Vegetation has grown back along each side of the ditch with no growth present inside the ditch itself. The CC has weathered very well with no visible changes. Some debris as been getting caught on the culverts entrances but this has not effected the CC's integrity. Since this CC installation, the customer has completed several other CC projects.

Area before site preparation and CC installation

CC installation - August 2013

36 months after installation CC is holding strong with no vegetation growth
